

Info Tech Assignment 4 **Cloud Computing** Name: \_\_\_\_\_

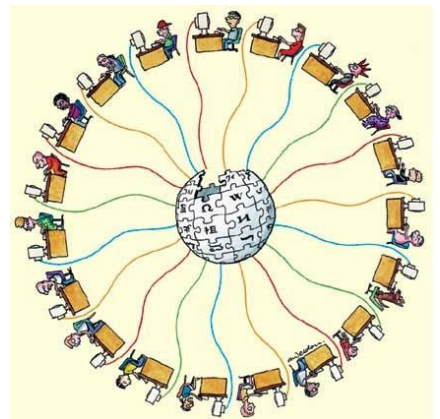

Submit: Printout

Period: \_\_\_\_

Cloud computing refers to the use of programs and storage provided by a host across the internet. In this assignment, you will create a wiki and an online survey using advertising supported hosts. A wiki is a collaborative website created corporately by its contributors.

### Project directions:

1. Go to <http://www.pbworks.com>
2. Move your mouse over the Personal tab and **select sign up now**.
3. Make a new wiki site. Choose as a topic something you think people will have strong opinions about. Politics, economic issues religion, school rules, the dress code, you name it; but keep it civil and clean. **The best topics are topics that stimulate discussion**.
4. Spice up your wiki with lots of **pictures**, colored texts, illustrations, cartoons and plenty of jokes.
5. Create a **survey** using <http://www.surveymonkey.com>, and put a link to it on your wiki. Post the results occasionally.
6. Invite at least **ten people** to edit your wiki, and inspire a spirited discussion. **Only two of the ten can be from our class**.
7. **Print** your wiki for credit. (Be sure your name is on it somewhere.)

### Suggestions:

1. It may be a good idea to put **instructions** about how to sign up right in your web page.
2. Consider saving an **icon** that goes directly to [pbworks.com](http://pbworks.com) and distributing it to your contributors. Do this by opening pbworks in a browser and **dragging the icon** next to the URL on to H: or your flash drive. You should be able to distribute a link to your site easily by giving it as an object to people you would like to invite.
3. Check your email often. People lose interest quickly, if they wait.
